New Zealand's leading pipeline and infrastructure manufacturer and distributor

- Focused company strategy
- Strong leadership
- Shared vision and values
- Career development
- A game plan for future success
- Technically savvy
- A great team
- Educational funding ... and more.

As part of the Fletcher Building Group, we've got lots to offer when you join Humes. Come and find out for yourself.

With an 80 year history, modern technology and innovative solutions Humes continues to grow. We're creating a Centre of Technical Excellence in the business and have several opportunities for the right people.

Technical Services Manager

Reporting to the General Manger, and heading our Centre of Technical Excellence, you will be the driving force in providing leadership, direction and strategy in positioning Humes as the leader in managing flow systems in the infrastructure of New Zealand's cities, towns and roading networks.

You'll lead the team of technical experts, influence key decision makers, manage engineered designs and represent the company at industry forums. Therefore you'll be commercially savvy and a talented leader. Technically experienced in product design and development, as well as in materials optimisation, you will be innovative and solution focused. Ideally you'll be a registered engineer but we will consider other technically qualified disciplines and experience.

These roles don't come around too often, don't miss the opportunity to set up this team and stamp your mark in New Zealand's infrastructure market.

Concrete Technologist

This is a unique opportunity for an expert in the production and use of concrete and alternative material properties. In keeping abreast of emerging materials technologies on a global basis and identifying opportunities to help us achieve our strategic objectives you will add enormous value through optimising mix design, improving consistency in product performance and reducing materials waste. This requires customer driven solutions and participation in product development as well as improving our manufacturing operational efficiency and our environmental footprint.

Your superior level of knowledge of materials and concrete technology, ability to design concrete products such as pre-cast elements and concrete pipes and strong influencing skills will be well utilised in this role. Preferably with a qualification in either Concrete Technology or equivalent engineering discipline, you will be an expert in your field.

Don't miss this opportunity to really make a difference in a dynamic and changing infrastructure environment.

Civil Engineers

We need two action orientated engineers who aspire to work as part of a dynamic technical team while supporting our energetic and driven sales and marketing teams.

New Zealand's leading contractors rely on Humes to help them build their reputations. Working in the business and supporting our customers, our engineers provide product designs and solutions in the roading, water, sewer, civil and infrastructure markets. If putting on your hard hat, steel cap boots and being on site one day while working in the office on design and developments the next, appeals to you, then this is the role you're looking for.

You'll prepare designs for special products with variations such as environmental exposure, geometry, loadings and weight. You'll evaluate feasibility of new product designs for safety, functionality, appearance, cost, specifications, market characteristics and manufacturing methods. You'll need to work to NZ specifications and standards and be responsible for maintaining a library of drawings.

Your CAD drawing skills, experience in the civil / infrastructure environment, strong customer / contractor relationships, and your influencing skills are all essential for this role. If you are CPEng registered or working towards it, or you have a diploma in engineering, preferably civil and have what it takes to respond and adapt to the changing needs of our customers then apply now.
