Option 1 (single pump)
Maximum of 7m total head
Quality single phase vortex pump
\$3,439.10 plus GST

Do you require a pump station for your next project?

Pump & Valve Specialties supply packaged pump stations to the trade for domestic and industrial situations where conventional gravity is not possible.

- **Steel trafficable lid**
- **High Quality On/Off Ball valve(s)**
- **High Quality Ball Check valve(s)**
- **High Strength Schedule 80 PVC pipework**
- **Control Panel including audible and visual alarms, pump duty alternation, control breakers for each pump and main isolation switch. (Not shown).**
- **Start/Stop/Alarm Level controls**
- **Strong Durable Polyethylene chamber**
- **Four pre-moulded inlet stubs ready for connection to gravity line**
- **Submersible pump(s) sized to meet your duty point**
- **Smooth interior wall – this won't corrode away and leave a pitted surface**

Advantages of Fluid-Tec Polyethylene packaged pump stations over concrete pump stations:

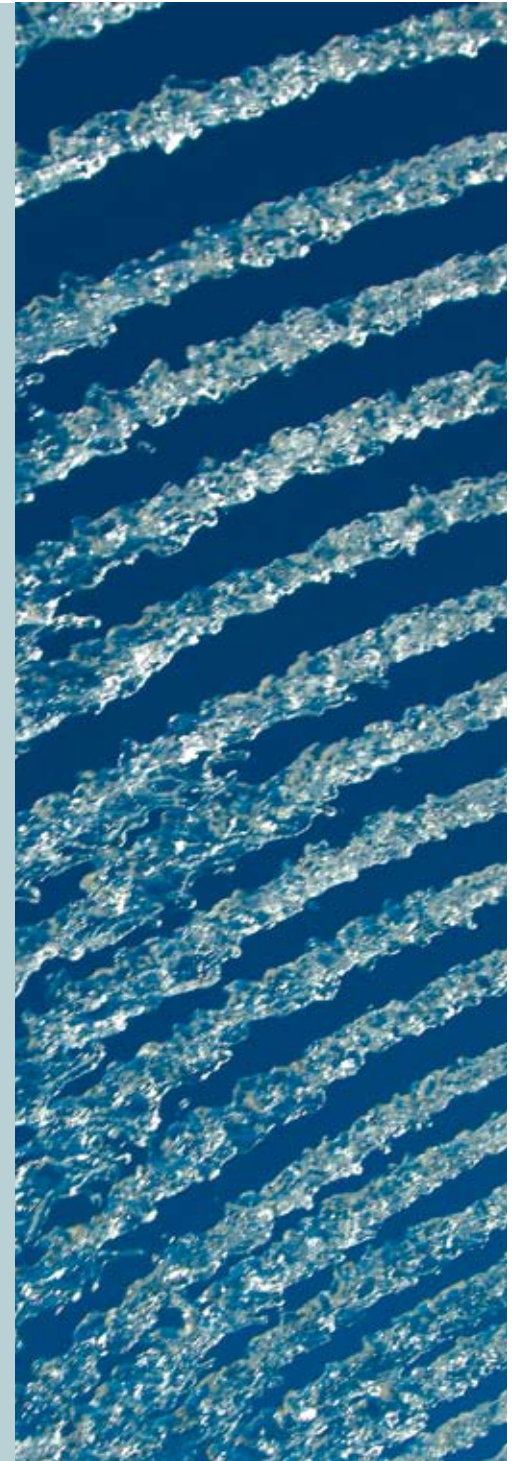

- **Lighter** – Much easier to transport and install.
- **Smooth interior surface** – Easier to clean down as part of the maintenance schedule.
- **Comprehensive package** – Pump & Valve offer a 'One Stop Shop' service including the chamber, all pipework, level controls, pump controller and a lid arrangement.
- **Factory built** – All the components are fitted out in the factory which means the highest level of quality is achieved. This also eliminates any problems arising from the components being 'fitted out' onsite by different tradesmen.
- **No hidden costs** – As we supply a complete package, there are no hidden costs that you will discover after purchasing a Fluid-Tec packaged pump station
- **Plug & Play system** – Pump & Valve supply most pumps with IP68 rated plugs on the pump and float cables. This eliminates problems related to faulty waterproof electrical joints made in the chamber. This also means an electrician does not have to disconnect the pump if it needs to be removed from the pit.

These are only a few of the great advantages we offer.

We look forward to hearing from you soon.

Best regards,

The Pump & Valve Team
