Water Trough

All stock water applications such as dairy, sheep, beef, horse, pig and goat.

Wide range of choices

Protect the stock

Prevent back-siphon

Durable and strong

Humes troughs are manufactured to a high quality standard.

Humes reinforced concrete Water Troughs are the leading farm troughs in New Zealand. Our range of troughs is suitable for small lifestyle blocks through to large farms running high numbers of sheep, beef, or dairy stock.

Water Trough

Humes reinforced concrete Water Troughs are manufactured to a high standard and have proven durability/longevity on the farm. They have been designed to address many of the problems faced by farmers using conventional watering systems.

Prevent stock injuries

The top edge of our troughs is curved to prevent injuries to the stock. The fittings in the CB & RB series are protected from stock damage - the ballcock is housed in a separate chamber with a concrete cover. The water supply connection is under the trough which prevents damage to the supply line and fittings. The pipe that feeds the ballcock runs up inside the wall of the trough to keep it protected from stock.

Easy to use and no back siphon

For easy maintenance access the ballcock valve is mounted above the water level and the very nature of the Humes trough design prevents the development of back siphoning situations.
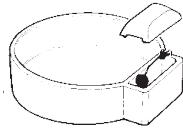

Manufacturing standards

Humes Water Troughs are manufactured to NZS 3109:1997.
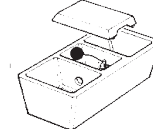

### Fig – Humes full concrete trough range

CB 100
Lifestyle

CB 500 - 2500
Cattle

CT 500 - 1500
Cattle

RB 200
Double-ended trough Sheep

RB 300/400
Trough Sheep

CB Series The fittings in the CB series are protected by a trough cover from stock.
