

# DOUBLE T FULL CONCRETE BRIDGES

QUALITY & SIMPLICITY

# WE TAKE THE HASSLE OUT OF BRIDGING.

At Humes, we understand that getting your bridging requirements sorted can be time consuming and frustrating. Dealing with engineers, your local council and contractors is seldom a simple exercise. That's why you should talk to Humes first.

The great news is we can help you with all of it. We'll help facilitate getting the team together to cover the initial site consultation, likely engineering requirements, potential council consents, design, fabrication and, finally, installation by contractors.

The end result is a bridge that's purpose built for your situation and backed by more than 90 years of innovation, manufacturing expertise and quality.

## There's a reason **Humes Double T Full Concrete** bridges are the first choice for farming and forestry applications:

- **Quick installation** – our full concrete beam access bridges are precast off site, which means they can be installed quickly and with minimal disruption to your business operations.
- **Durability** – use of pre-stressed 800mm deep concrete beams means greater durability with less maintenance costs (ideal in areas where coastal or geothermal corrosion is problematic). Humes Double T Full Concrete bridge has a design life of 50 years.
- **Strength** – they offer a full 0.85 HN loading suitable for milk tankers, tractors and farm machinery.
- **Versatility** – the standard Double T lengths range from 8 to 18 metres and feature built-in continuous kerbing on either side of carriageway to contain effluent and run off, as well as galvanised steel balustrades and pipe handrails.

Let's talk about your bridging needs. Whatever the application, whether it's farm, forestry, subdivision, park or golf course, we have a range of Double T rural bridges and alternative options - including concrete deck over steel beams, culverts and pipes.

We'll be happy to take the hassle out of bridging for you. So let's talk.
